# PAIRING AN UNASSIGNED BROTHER PORTABLE PRINTER
WITH THE SCHILLER TOUCH

Printers have been assigned to individual Touch 7 devices and should remain together as a pair. Follow procedure below to pair an unassigned printer to the Touch 7 should this be a requirement.
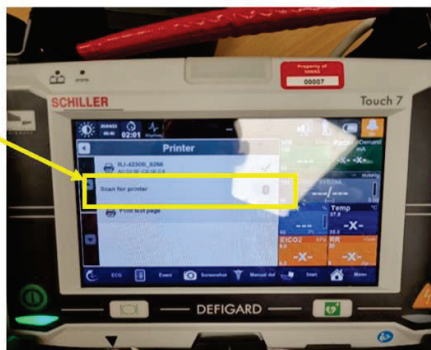

1. Power up the printer and the touch 7. Wait for 3 dots to change to bars (approx. 20 sec). Once changed select this icon
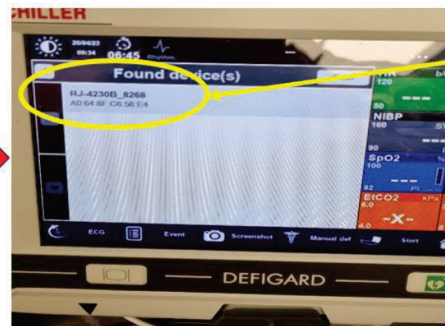

2. From following menu select 'Printer' (Red X shows printer not found)

3. From following menu select 'Scan for printer'. The Touch 7 will now scan for available printers

4. Once the Touch 7 has found the printer it will denote it by displaying the last 4 numbers of the printer serial number.

Note: If multiple printers are within Bluetooth range, the Touch 7 will display multiple printer options, please make sure you select the correct serial number that matches the printer you wish to pair!

5. 'Pairing Successful' will be shown upon completion of the pairing process
